sun height 12°, from SE (133°) [EET]

sun height 28°, from S (174°) [EET]

sun height 18°, from SW (218°) [EET]

night — no sun [EET]

HOW TO READ — OPTION E through the year

SUMMER (21 June): sun very high at midday (~70°); the roof's shade sits close under the roof; mornings are shaded by the tall wall (sun in the east, over the wall); evenings the annex and the garden wall shade most of the courtyard.

SPRING / AUTUMN (21 March / 21 September): sun at ~50° at midday; the roof's shade reaches further out (about 2 m) from under the roof, towards the tall wall and the annex door; the tall wall shades the courtyard in the morning.

WINTER (21 December): sun low all day (12-28°), from the south-east to the south-west; in the morning and at midday it reaches in under the roof (the roof hardly blocks the winter sun — warm corner); by 15:00 the low garden wall shades most of the courtyard; after ~17:10 the sun has set (18:00 shown as night).

Assumptions: Athens 37.98 N, 21st of the month, local clock time (EET / EEST); NORTH towards the upper-left of the plan (client); existing trees not included (they add shade).

COURTYARD ROOF — SHADOW STUDY

Sun & shadow through the seasons (21 Mar / Jun / Sep / Dec), Athens

37.98 N; OPTION E — rectangle 3.06 x 3.44 to the end of the AC line;

roof supported by the tall wall, AC above the roof

Client: Owner / Client

Design & drawings: Claude Code

DRAWING NOTES

- Do not scale from this drawing. Use figured dimensions only.
- All dimensions in millimetres; levels in metres relative to internal FFL ±0.000 (datum to be tied to site survey).
- Contractor to verify all dimensions, levels & existing structure on site before fabrication or ordering.
- Read with all other architectural, structural & services drawings and the specification notes (A-001).
- Structural members are preliminary: final design, connections & calculations by a licensed structural engineer to local code before construction.
- Report any discrepancy to the designer before proceeding.
